81. Define Action : $S = \int L dt$

$$\text{Variational Inference } \delta S = \int \delta L(q, \dot{q}, t) dt = \int (\frac{\partial L}{\partial q} \cdot \delta q + \frac{\partial L}{\partial \dot{q}} \cdot \delta \dot{q}) dt = 0$$

- Comments on \dot{q}

$$L \rightarrow \dot{q} \text{ for } q = q_{\min} + \underbrace{\delta q(t)}_{\text{cause change}}$$

As seen in definition

$$q(t_1) + \delta q(t_1) = q(t_1)$$

$$\delta q(t_1) = \delta q(t_2) = 0$$

$$\int_{t_1}^{t_2} (\frac{\partial L}{\partial q} \cdot \delta q + \delta q \cdot \frac{\partial L}{\partial \dot{q}}) dt = \int_{t_1}^{t_2} \delta q (\frac{\partial L}{\partial q} - \frac{\partial L}{\partial \dot{q}}) dt = 0$$

$$\int_{t_1}^{t_2} \delta q (\frac{\partial L}{\partial q} - \frac{\partial L}{\partial \dot{q}}) dt = 0$$

$$\frac{\partial L}{\partial q} = \frac{\partial L}{\partial \dot{q}} \frac{d}{dt} \quad \text{Lagrange Equation}$$

82. - Limitation / Variation form on $L(q, \dot{q}, t) = L(q, \dot{q}, t) + \frac{d}{dt} f(x, t)$

$$\text{For } S' = \int_{t_1}^{t_2} (L + \frac{d}{dt} f(x, t)) dt$$

$$= S + f(x, t_2) - f(x, t_1)$$

$$\delta S' = \delta S + \delta [f(x, t_2) - f(x, t_1)] \quad \text{Since } t_1, t_2 \rightarrow q_1, q_2 \text{ is assigned.} \quad \delta S' = \delta S + 0 \quad \text{both Function Same}$$

Prac. 1 $H = \frac{P^2}{2m} + \frac{1}{2} m \omega^2 q^2$ Use $F_i(q, p)$ Simplify

Goal is kill Q in $K(q, p)$ to make cal. easier.

Take $f(p) g(p)$ Same Param. on sin, cos

$$H = P^2 / (2m) + Q^2 / (2m\omega^2) \quad \text{Try on set} \quad P = \sin Q f(p) \quad Q = \cos Q g(p)$$

$$\sin^2 Q \cdot f(p)^2 / 2m + \cos^2 Q \cdot g(p)^2 / 2m\omega^2$$

To Construct $\sin^2 Q + \cos^2 Q \rightarrow f(p)^2 / 2m = g(p)^2 / 2m\omega^2$

$$f(p) = \pm g(p) \omega \rightarrow P = \sin Q g(p) \omega \quad q = \cos Q g(p)$$

$$\sin^2 Q g(p)^2 \omega^2 / 2m + \cos^2 Q g(p)^2 / 2m\omega^2$$

$$\text{With Now } K = \frac{1}{2} g(p)^2 \omega^2 \quad \{q, p\}_{q, p} = \{q, p\}_{q, p} = \frac{\partial q}{\partial p} \frac{\partial p}{\partial q} - \frac{\partial q}{\partial q} \frac{\partial p}{\partial p} = 1$$

$$= -\sin Q g(p) \sin Q \frac{\partial g}{\partial p} \omega = -$$

$$-\cos Q \frac{\partial g}{\partial p} \cdot \cos Q g(p) \omega = -$$

$$g(p) \frac{\partial g}{\partial p} \omega = +1$$

$$\frac{1}{2} g(p)^2 = \pm \omega \omega$$

$$\Rightarrow g(p) = \sqrt{\pm \omega}$$

$$H = \frac{1}{2} m \omega^2 \cdot \frac{P^2}{m \omega} = \frac{P^2}{2m}$$

$$\Rightarrow Q = \omega \quad P = \omega \quad q = \omega \quad p = \omega$$
